1 Aufgabe2

$$SMO \quad B7$$

$$A2 \quad 0) \quad \overline{\chi} = \frac{1}{n} \sum_{i=1}^{n} \chi_{i}$$

$$Saifk \quad Cw. Take : \quad \overline{\alpha}_{i}$$

$$\langle \overline{\chi} \rangle = \frac{1}{n} \langle \underline{\chi} \chi_{i} \rangle$$

$$= \frac{1}{n} \cdot n \cdot \mu = \mu \quad \mathcal{E}_{7}.$$

$$B) \quad \overline{\chi} \quad Var[\overline{\chi}] = Var[\frac{1}{n} ; \underline{\chi} \chi_{i}]$$

$$= n^{-2} \quad Var[\underline{\xi} \chi_{i}] = n^{-2} \underbrace{\xi} \quad Var[\chi_{i}] \quad \sigma = \overline{Var}$$

$$\downarrow \chi_{i} \quad \chi$$

Abbildung 1: .

$$= n^{-1} \left\langle \sum_{i} (x_{i} - x_{i})^{2} - 2n(\sum_{i} x_{i})(x_{i} - x_{i})^{2} \right\rangle$$

$$= n^{-1} \left\langle \sum_{i} \left\langle (x_{i} - x_{i})^{2} \right\rangle - n \left\langle \left(\sum_{i} x_{i} x_{i}^{2}\right) \right\rangle$$

$$= n^{-1} \left(n \operatorname{Var}[x] - n \cdot \operatorname{Var}[x] \right)$$

$$= \operatorname{Var}[x] - \operatorname{Var}[x] = 0^{-2} - 0^{2}$$

$$= n^{-1} \cdot 0^{-2} \neq 0^{2}$$

$$= n^{-1} \cdot 0^{-2} \neq 0^{2}$$

$$= n^{-1} \cdot \int_{1}^{1} (x_{i} - x_{i} x_{i})^{2}$$
